

HOW RED HAT ANSIBLE CAN EASE YOUR SAP HANA MIGRATION

MODERNISE YOUR SAP LANDSCAPE WITH ADVENT ONE & RED HAT

Organisations are realising that to speed up the path to digital leadership, you must modernise your environment. Digital transformation can help IT organisations become more valuable to their customers. With IT environments becoming increasingly more complex, and IT security and scalability becoming top priorities, Advent One believes that automation is the most crucial piece of the puzzle.

Advent One has extensive experience in migrating data-intensive workloads to ensure rapid delivery and implementation, reduced projects costs and most importantly, delivering a stable and consistent operating environment for business-critical applications across public, private and hybrid cloud.

THE POWER OF AUTOMATION

Complexity hinders productivity by increasing manual effort and resource allocation. But when you automate, you accelerate. Automation is an essential and strategic component of modernisation and digital transformation. Modern, dynamic environments need a new type of management solution that can improve speed, scale and stability across the entire enterprise IT environment while increasing employee satisfaction.

With automation you can significantly reduce effort, cost, and errors while ensuring your migration is secure and compliant. With environments becoming more complex, automation provides confidence, assurance and security that your systems are working together in an efficient and secure way. No matter the complexity of your environment, or where you are on your modernisation journey, an IT operations automation strategy will help you to improve existing processes.

Advent One is very passionate about automation and partner with industry-leading organisations, like Red Hat, to deliver automated solutions to our clients. When strategising outcomes for our customers, we always look to incorporate automation to accelerate the implementation process, reduce costs and increase performance and scalability.

WHAT IS ANSIBLE?

Ansible is an open-source platform used to automate repetitive IT tasks such as configuration management, application deployment, intra-service orchestration and provisioning. Ansible simplifies complex tasks, delivering consistent outcomes, reducing downtime and freeing up resources to focus on efforts that can add more value to an organisation. Put simply, Ansible gives you the ability to automate your entire IT landscape in a single tool, increasing efficiency and downtime.

MODERNISE YOUR MIGRATION WITH ANSIBLE

Migrating to SAP HANA presents an opportunity to realign your SAP environment with your overall digital transformation strategy. By modernising your SAP environment, you can gain faster data access for users and applications, more accurate insight via machine learning models, and increased agility to better support digital business demands.

Ansible technology ensures your migration to SAP HANA progresses quickly and smoothly with the peace of mind that the pre-requisites and configuration settings are going to be applied correctly each and every time. Additional features such as security and backup can also be configured in line with the documented best practices from SAP. Post migration automation helps you keep your systems in line with the SAP recommendations delivering consistent and reliable platforms to support your business-critical workloads.

WHAT IS DRIVING ORGANISATIONS TO SAP HANA?

SAP HANA migration is the process of moving from the current database SAP ECC or R3 database, to in-memory SAP HANA.

For those organisations who are already running their SAP Applications on HANA v1, the clock is ticking! To continue receiving SAP support organisations must migrate their underlying databases to SAP HANA V2 (2021) and their existing SAP applications to SAP S/4HANA by 2027.

If you are running SAP and looking to move to HANA or migrate to S/4HANA, Advent One can help! We have extensive experience in moving data-intensive workloads and leveraging automation to deliver a solution that is fast, affordable and secure. We would love the opportunity to transform and modernise your IT environment so your organisation can meet the expectations of tomorrow.

BENEFITS OF ANSIBLE FOR SAP:

- Set up a SAP (HANA) instance including best practices and tuning within less than 15 min.
- Avoid configuration drifts between staging / production environments
- Fast, controlled and reproducible roll out of changes into production
- Integration with existing management tools
- Provide Bare-Metal-as-a-Service
